SUMMARY

Software Engineer with 4+ years of experience developing and maintaining production-grade backend systems using Java and Spring Boot. Experienced in microservices, REST APIs, Spring WebFlux, Kafka, PostgreSQL, MongoDB, Redis, AWS, Docker, and CI/CD. Contributed to large-scale systems including a 10+ microservice ecosystem and an enterprise MDM platform managing 120,000+ devices and search systems backed by OpenSearch.

SKILLS

Language & Frameworks: Java, Spring Boot, Spring WebFlux, Spring Data JPA, Spring Security, OpenFeign, WebClient

Data & Search: PostgreSQL, MongoDB, MySQL, Redis, OpenSearch

Web & APIs: REST APIs, JSON, JWT

Frontend: TypeScript, React, Thymeleaf

Cloud & DevOps: AWS (EC2, S3, RDS, ECR, CodeBuild, CodePipeline, Secrets Manager), Docker, CI/CD

Messaging & Resilience: Apache Kafka, Google Pub/Sub, Resilience4j (Circuit Breaker & Retry), ShedLock

Testing: JUnit, Mockito, Jest

Tools: Git, Bitbucket, Postman, Linux, Apache Tomcat, Firebase, Gradle, Maven, JIRA, Shortcut, ClickUp

AI-Assisted Development: Claude Code, GitHub Copilot, ChatGPT, Gemini

PROFESSIONAL EXPERIENCE

atB Lab Limited

05/2026 – Present | Dhaka

Software Engineer

- Developing and maintaining backend software solutions for Japanese clients and projects.
- Contributed and maintained Java 21 REST services for the PORTERS Search platform, supporting dynamic search execution across SQL databases and OpenSearch.
- Contributed to search functionality involving query parsing, optimization, analysis, strategy selection, and backend-specific execution.
- Contributed and maintained TypeScript/Jest-based black-box E2E tests for Search Core and PrivateAPI, covering REST API behavior and positive/negative test scenarios.
- Worked with Docker, Dev Containers, AWS ECR, Gradle, JUnit, and CI/test reporting as part of the development and test execution workflow.

Unisoft System Limited a concern of Smart Technologies (BD) Ltd.

08/2025 – 05/2026 | Dhaka

Software Engineer

Project: Collection & Recovery Management System (CRMS) – Prime Bank

- Developed and maintained backend services using Java & Spring Boot in a microservices architecture.
- Designed and implemented REST APIs for loan, recovery, and collection modules.
- Implemented service-to-service REST communication using OpenFeign for declarative HTTP clients and WebClient for reactive, non-blocking communication.
- Worked with PostgreSQL and optimized database queries for performance.
- Implemented business logic for financial workflows and recovery processes.

Taghyeer Technologies

06/2024 – 07/2025 | Dhaka

Java Backend Engineer

- Maintained and enhanced 10+ production microservices using Java, Spring Boot, Spring WebFlux, PostgreSQL, MongoDB, Redis, and Kafka.
- Developed features using Kafka-based event-driven communication and reactive programming with Spring WebFlux.
- Implemented and maintained AWS-based CI/CD workflows using CodePipeline, CodeBuild, and ECR.
- Deployed services using Docker across staging and production environments.
- Utilized AWS services including EC2, S3, RDS, and Secrets Manager.

INOVEX Idea Solution Limited

04/2022 – 05/2024 | Dhaka

Software Engineer

- Contributed to the development of RESTful APIs for 120,000+ managed devices in an enterprise MDM system.
- Built a secure backend using Spring Boot, Spring Security, and MySQL.
- Optimized database performance with JPQL and Native Queries.
- Worked with Google Android Management API, Firebase Cloud Messaging (FCM), Google Pub/Sub.
- Developed and integrated RESTful APIs to enable real-time communication between the Android MDM Agent App and the Spring Boot backend for device management, content sharing, and instant notifications.
- Implemented APIs for content sharing, instant notifications and messaging using Firebase Cloud Messaging (FCM), location tracking, and device status management.

PROJECTS

PORTERS Search Core – Search Service

- Contributed to a Java 21 → Java 25 migration, identifying compatibility issues, updating dependencies and build configurations, and verifying application and test stability.
- Contributed to a Java 21 REST search service that dynamically executes search queries against SQL databases and OpenSearch.
- Worked with a query-processing pipeline involving query parsing, optimization, analysis, strategy selection, and backend-specific execution.
- Contributed to search functionality and automated testing using JUnit, with development and execution supported by Gradle, Docker, and Dev Containers.

Search Core + PrivateAPI – E2E Testing

- Developed and maintained TypeScript/Jest-based black-box E2E tests for Search Core REST APIs, covering search scenarios across multiple resources and condition types.
- Implemented and maintained automated test cases for SQL and OpenSearch-backed search functionality, including positive and negative search scenarios.
- Created and managed test data and test environments using Python scripts, Docker, Dev Containers, and AWS ECR, supporting both local and remote test execution.

Dream Emirates (Microservices Ecosystem)

- Worked across a 10+ service microservices ecosystem covering User Profile, Wallet, Subscription, IAM, Billing, Gateway, and Financial Account domains.
- Contributed to event-driven architecture, distributed caching, fault tolerance, scheduled jobs, and AWS-based CI/CD.

MobiManager - Mobile Device Management (MDM)

- Contributed to the development of MDM solution managing 120,000+ devices.
- Created RESTful APIs for device policies, remote actions, app installations.
- Integrated Android MDM Agent App for real-time monitoring.

CERTIFICATIONS

- Learning Java - LinkedIn
- Programming Foundations: Databases - LinkedIn
- Java (Basic) - HackerRank
- Java Certificate - sololearn
- GIT Certificate - Udemy

EDUCATION

JAHANGIRNAGAR UNIVERSITY

MSc. Computer Science & Engineering | CGPA: 3.48

2019 | Dhaka, Bangladesh

AMERICAN INTERNATIONAL UNIVERSITY- BANGLADESH

BSc. Computer Science & Engineering | CGPA: 3.63

2017 | Dhaka, Bangladesh
